HTA for Final Project
App: Hidden Treasure

Plan #1: Step 2 > Step 2-b > Step 2-a
In this situation, the user is looking to find a backpack she saw someone had at the mall. So to do so, she needs to make a post on the app. From here she uploads a photo of the backpack, and then goes further to provide a description for the backpack to help the individuals who are going to help her find it better. (The more info, the better!)

Plan #2: Step 1 > Step 1-a > Step 1-a-1
In this situation, the user is someone that wants to help others find the items they want. This user browses through everyone's posts. He comes across a post of shoes he owns. He tries to look for those shoes online, so that he can help the individual. He successfully finds the shoes online, so then he goes back to the app to comment on the post that he has found the item! In his comment, he leaves the link of the shoes, just in case the person decides they want to get it.
